CO.M.CE. S.p.A.

Compagnia Montaggi Cesena

History

CO.M.CE. Compagnia Montaggi Cesena S.p.A., founded in 1974, represents since then a reference point for major Customers into Refining & Marketing industry, with great focus into tanks maintenance, and able to provide a Global Service, that goes from design, to construction and installation of tanks, buried tanks, plants, pipeline, steel structures, skids and buildings, both in Italy and abroad.

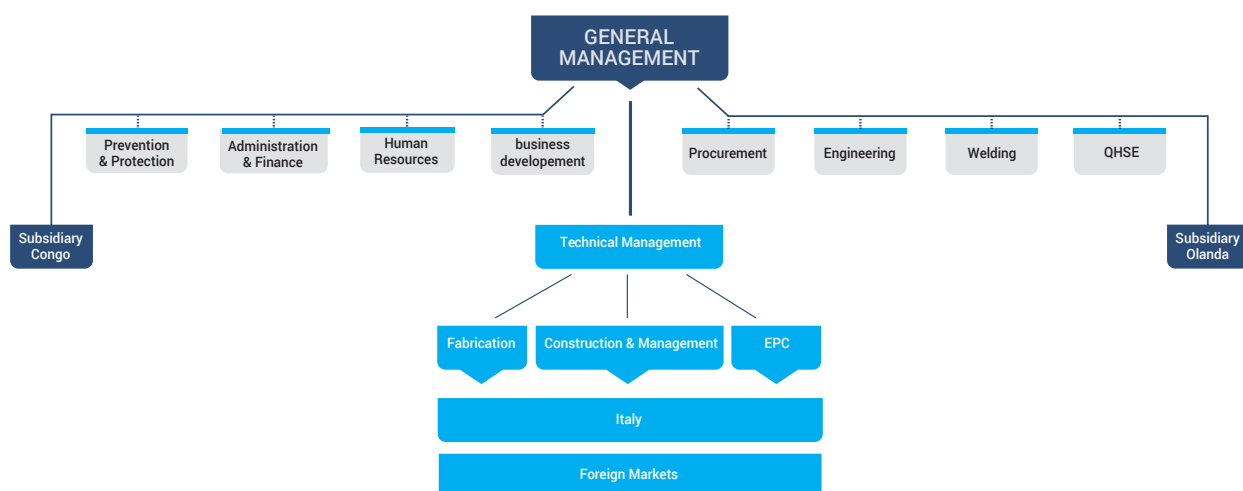

Mission

We work in the Oil & Gas industry, striving during more than 40 years for the excellence in design, in construction, installation and maintenance of oil tanks and industrial plants, with special attention to people, environment and integrity.

Company Organization

Over the years, the choice of an articulated and dynamic company structure has been the best answer to market and Customer needs: from assembly to installation of Petrochemical plants, combined cycle plants, LNG terminals and incinerators offering a turnkey service.

Presentation

We support Customer with management and coordination of each project throughout design, procurement and construction processes, as well as during commissioning and startup. We offer the Customer an overall perspective, a cost reduction and shorter times for execution of the entire project.

Headquarters

Headquarter is located in Cesena city center. Technical, Sales and Administrative offices are placed in an area of 600 m².

Workshop

Workshop for prefabrication and manufacturing of products going to be assembled on field and customer's sites, are located in the industrial area of Cesena, Torre del Moro. With an entirely fenced area of 10.000 m², of which 5.000 m² covered and an additional area of 500 m² dedicated to offices and general facilities.

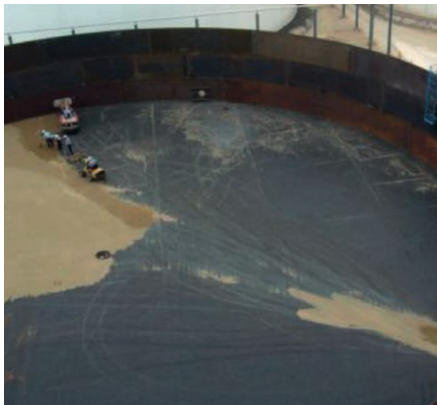

Warehouse

Warehouse is located near the workshop and covers a surface of 2.000 m², with additional outdoor areas for production of 3.000 m², for materials handling, and area for offices and facilities of 200 m².

in our products

Services

Complete Services
of design, construction, assembly
and maintenance

Design

Design phase is the most distinctive feature of COMCE selling proposition. It represents the starting point that allow us to give the Customer the best product ever in terms of quality, functionality, price and deadline. Technical department ensures perfect realization of designing activities, with cooperation and supporting other company departments, optimizing technical and economical choices in compliance with contract obligations. Range of services offered goes from design of storage tanks up to 160.000 m³ capacity, to vessels, petrochemical plants, civil and industrial buildings.

Manufacturing and Erection

Manufacturing and erection activities have always been a challenge for COMCE, being the core-business of the company. Qualified staff, very capable technical department and experienced project managers allow the company to operate smoothly and in accordance with its high quality target into manufacturing and erection of:

- Cryogenic, low temperature & atmospheric storage tanks up to 160.000 m³ of capacity;
- Vessels and pressure equipments;
- Buried tanks;
- Civil and industrial metal structures;
- Industrial buildings & sheds;
- Combined cycle and turbo-gas plants;
- Petrochemical plants;
- Agro industrial plants;
- Pipelines and gas-lines;
- Waste water treatment plants;
- WTE - Waste to Energy Plants.

Maintenance

The great experience gained over the years in the field of maintenance allows us to offer a Global Service at highest levels, optimizing another fundamental factor: time. Maintenance is the most critical task in the oil production and refining sector, since it is performed on plants, equipment's, transfer lines, storage tanks, etc. which are parts of the process, and here time management is always compelling.

Testing and Controls

Manufacturing and erection activities of complex welded structures, as for instance storage tanks and industrial plants, need specific quality controls of welded joints. Within our staff we are proud to list certified technicians, experienced and specifically skilled, officially qualified in the execution of investigation tests such as: [X-ray testing](#); [MPI – Magnetic Particles Inspections](#); [LP – Liquid Penetrant tests](#); [Vacuum box tests](#). For storage tanks, in order to prove the integrity of the whole structure or part of it, final tests are performed, e.g.:

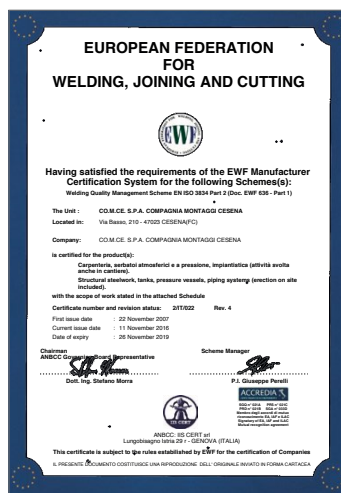

- Hydraulic tests and functional tests of cooling and foam plants;
- Leak tests with nebulized diesel fuel on floating roof tanks;
- vacuum box tests of bottom and roof;
- pressure tests of articulated drainage piping and heating coils;
- Functional tests of floating roof and seal assembly;
- Leak test of double bottom.

Certifications

Quality Management System for a reliable product

UNI EN ISO 9001
Quality Management
System

UNI EN ISO 3834-2
Welding Management
System

UNI EN ISO 14001
Environmental Management
System

Sustainability

Safety, reliability and respect
for the environment

Safety at workplace

Past helps us to prevent the future, and managing safety means to COMCE to ensure our people out of any danger. We learn from the past and we try to prevent future risks, through a system organization that analyzes dangers, reducing hazards and adopts needed measures to avoid or reduce them. People, environment, products, and reputation we want everything to be under control.

Commitment

In line with most advanced standards of Corporate Governance as required from market - i.e. a system of technical and legal regulations defined to manage effectively and efficiently our company COMCE has adopted since long time a Code of Ethics, that clearly defines the whole set of inwards and outwards responsibilities.

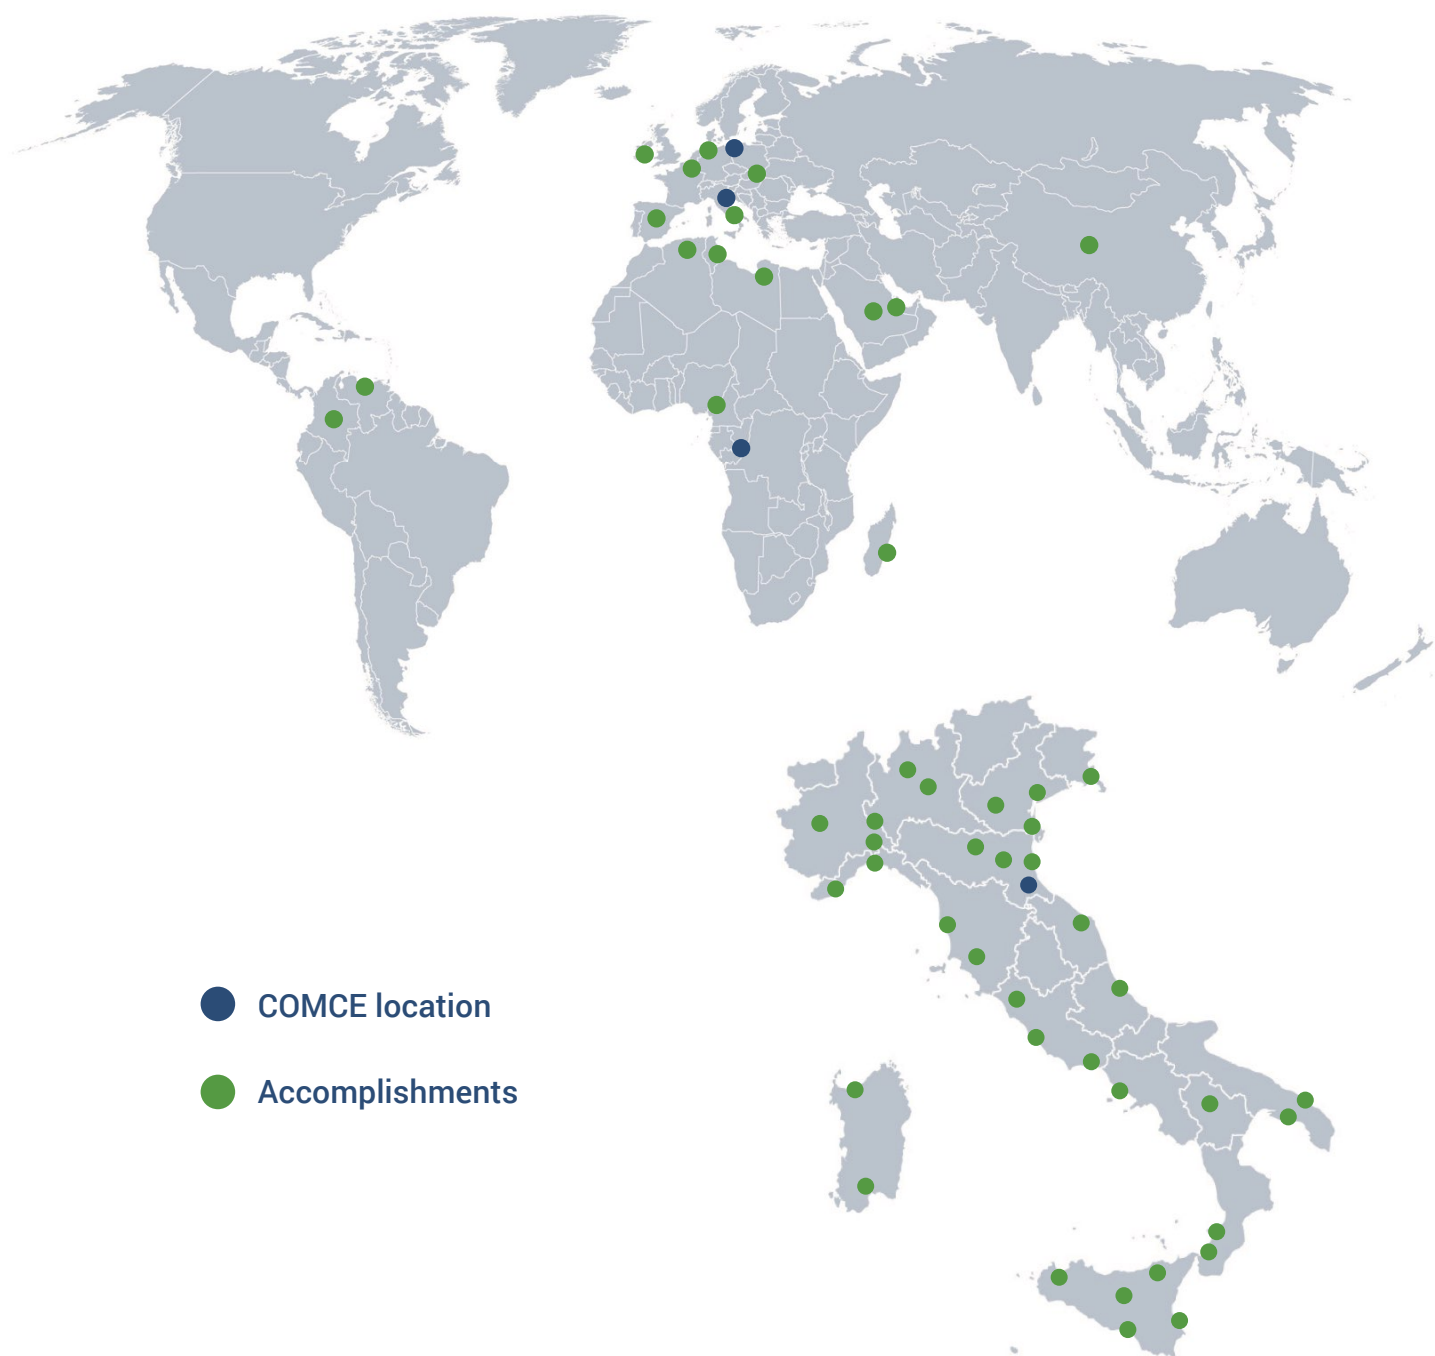

Environment

For us, continuous improvement protecting the environment and ensuring health and safety everywhere we operate, are essential components for our sustainability strategy. Certifications owned state the excellence of COMCE's production processes and management system, based on prevention, protection, information and participation.
